PROFILE

Technical SEO specialist working full time in search since 2022, agency side and in-house. Most of my week is technical audits, crawl and indexing work, internal linking, schema markup, Core Web Vitals and on-page work across Shopify and WooCommerce stores, WordPress sites and local service businesses. I do the implementation myself rather than handing a list to someone else's developer, and I write the automation I need instead of buying it: Python and Node, direct API integrations, built in Claude Code against the repo.

SELECTED RESULTS

- **38% average organic traffic lift** across seven client sites.
- **Zero to roughly 1,000 organic visits a month in five months** for a local service business, plus a top three Google map pack position on its main term.
- **67% organic traffic growth in four months** on a technical turnaround.
- **373 products and 835 variants** migrated off WooCommerce onto Shopify on the same domain, with **739 redirects** mapped so search positions survived the replatform.
- **822 Merchant Center offers** built and validated by hand with zero errors, after Google's own integration could not produce a working feed for that store.
- Meta pixel rebuilt server side after it had recorded thousands of add to carts and not one purchase; campaigns then measured **5.7% of ad clicks** converting to showroom actions.
- **34 numbered findings** from a national e-commerce certification review, fixed and verified on the live store.
- **200+ technical issues** resolved across ecommerce stores, service sites and blogs; **1,137 sites audited**.

EXPERIENCE

SEO Lead — Dx Creativ

- Own technical SEO delivery across client accounts: audits, crawl and index remediation, schema, site structure and Core Web Vitals.
- Run ecommerce migrations end to end, including redirect mapping, feed rebuilds and post-launch verification in Search Console.

SEO Specialist — UnitedSol

- Technical audits and on-page programmes for ecommerce and service clients, working from Screaming Frog crawls and Search Console data through to implementation.

SEO Executive — Pet Solutions

- On-page optimisation, keyword mapping, local SEO and Google Business Profile work.

ENGINEERING

- **Django CRM, built from scratch** for a client locked out of their previous system. Ten years of history migrated in, **11,756 lines of tests** behind it, owned by the client rather than rented.
- **Outreach and lead automation in Node** talking directly to the Gmail, Sheets and Docs APIs, with scheduling, reply detection, bounce handling and per-variant reporting. No no-code tools in the chain.
- **Job pipeline in Node** pulling seven public APIs, scoring postings against a weighted profile, deduplicating and dispatching applications.

SKILLS

Technical SEO: audits, crawl and indexation, log and coverage analysis, canonicals, internal linking, redirect mapping, migrations

Structured data: JSON-LD, Product, LocalBusiness, Article, FAQ, rich result validation

Performance: Core Web Vitals, LCP, INP and CLS remediation, page speed

Platforms: Shopify, WooCommerce, WordPress, Elementor, Webflow, Squarespace

Tools: Search Console, GA4, Tag Manager, Screaming Frog, Ahrefs, Semrush, Merchant Center, Looker Studio

Code: Python, Django, JavaScript, Node, Git, REST APIs, pytest, Claude Code

EDUCATION AND CERTIFICATION

BA Business, Institute of Management Sciences, Peshawar · Google Digital Marketing & E-commerce Specialization · English: native or bilingual
