Johar Rehman

Technical SEO Specialist · Audits, Schema, Core Web Vitals, Shopify & WordPress

Islamabad, Pakistan (UTC+5) · johar.digitally@gmail.com · +92 332 0423783 · linkedin.com/in/johar-rehman · joharcreativ.com

PROFILE

Three years in search, agency side and in house, now running growth end to end. My work is audits, crawl and indexing, schema markup, site architecture, redirects and Core Web Vitals, across WordPress, Magento, Shopify and WooCommerce, plus Google Ads and the tracking that tells you whether any of it worked. I implement rather than hand over recommendations, and I build the tooling in Python and Node when an off the shelf product will not do the job: a CRM, a newsletter platform, and the automation around both.

EXPERIENCE

Performance Growth Marketer · Loopin · June 2026 to present

- Own the CRM end to end: data model, workflow, and the automations running inside it for order status, payments, paperwork and customer messaging.
- Built and run the newsletter and lifecycle email system, covering campaign flows, discount codes, deliverability and revenue attribution.
- Technical support across the whole online estate, from site and tracking faults to the internal systems the team works in daily.

SEO and Google Ads Executive · Dx Creativ · October 2025 to June 2026

- Technical SEO across client accounts: audits, crawl and indexing, schema, internal linking, redirects and Core Web Vitals.
- Google Ads management alongside the organic work, including Shopping campaigns and Merchant Center feed health.

SEO Executive · United Sol Pvt Ltd · June 2024 to October 2025 · Islamabad, Pakistan

- Run periodic full site audits, identify technical faults and implement the fixes: crawl errors, broken links, page speed and site architecture.
- Resolve indexing problems by diagnosing why pages were excluded, then getting the full page set indexed and verified in Search Console.
- Create and correct **schema markup** across blog and product templates, including auditing existing structured data for errors.
- Manage **301 redirects** to preserve link equity across URL changes, identify duplicate pages and implement canonical tags.
- Build and maintain sitemaps and robots.txt to improve crawl efficiency and keep the important content indexed.
- Publish multi-language product pages through **Magento 2** to open additional markets, and manage product documentation in Strapi.
- Set up and optimise **Google Business Profiles across two locations**: categories, services, geo-tagged imagery, directory listings and review generation.
- Deep keyword and competitor gap analysis; strategies built from it reached a stated success rate above 70%.
- Design and run email campaigns end to end, and optimise YouTube video metadata.

Manager · PAK Tour Guide · December 2024 to March 2025, alongside the role above

- Owned SEO strategy and delivery for the full site, including fixing technical and backend faults rather than handing them to a developer.
- Worked with design and development to resolve site issues and improve page speed.
- Set up Google Business Profiles for local visibility, ran email campaigns and reported performance from analytics.

Affiliate Marketing & SEO Executive · PetSolutions · March 2023 to December 2023

- Drove organic traffic and affiliate revenue for a US pet product site, working independently end to end.
- On-page and off-page SEO, internal linking, and structured data to lift click-through and rankings.
- Buyer-intent keyword research, competitor analysis, and performance tracking in Google Analytics.

Wholesale Virtual Assistant · DanEcommerce · October 2021 to July 2022

- Amazon product research, brand and distributor sourcing across the US and UK markets.

SELECTED PROJECT RESULTS

Outcomes from client and independent project work. Figures are the measured result in each case.

- **38% average organic traffic lift** across seven client sites.
- **Zero to roughly 1,000 organic visits a month in five months** for a local service business, plus a **top three map pack** position on its main term.
- **67% organic growth in four months** on a technical turnaround.
- **1,137 sites audited**, with findings ranked by impact and effort rather than exported from a tool.
- Ecommerce replatform onto Shopify on the same domain: **373 products and 835 variants** migrated, with **739 redirects** mapped programmatically so search positions survived.
- **822 Google Merchant Center offers** built and validated by hand with zero errors, after the platform's own integration could not produce a working feed.
- Conversion tracking rebuilt server side after a pixel had logged thousands of add-to-carts and no purchases; the account subsequently measured a **4.3% conversion rate** across all campaigns.
- 34 numbered findings from a national e-commerce certification review, fixed and verified live.

TECHNICAL SKILLS

Technical SEO: site audits, crawl and indexation, canonical tags, 301 redirect mapping, site architecture, internal linking, sitemaps and robots.txt, migrations

Structured data: JSON-LD, Product, LocalBusiness, Article and FAQ schema, rich result validation

Performance: Core Web Vitals, LCP, INP and CLS remediation, page speed optimisation

Platforms: WordPress, Elementor, Magento 2, Shopify, WooCommerce, Strapi, Webflow

Tools: Google Search Console, GA4, Google Tag Manager, Screaming Frog, Ahrefs, SEMrush, Moz, Google Merchant Center, Yoast, RankMath

Local SEO: Google Business Profile, multi-location management, citations and NAP consistency

Code: Python, Django, JavaScript, Node, REST APIs, Git, pytest

EDUCATION

BBA (Marketing), Institute of Management Sciences, Peshawar · 2020 to 2024
Final year research on consumer trust in e-commerce transactions and its effect on online purchasing behaviour, using PROCESS macro and Sobel test mediation analysis.
